

**CASE STUDY: LEWIS & MUNDAY**

**IT CONSULTING**

**WORKFLOW**

**WORKFLOW STATS**

**PROBLEM**

Lewis & Munday was using unreliable, aging Windows servers that required constant unscheduled maintenance. The servers were failing on a weekly basis and became more of a liability than a solid network.

**SOLUTION**

Sector 7 proposed virtualizing Lewis & Munday's multiple failing servers and consolidating down to 2 updated servers.

**PROCESS**

Deploy new servers to site, schedule a block of time over a weekend to avoid any down time, migrate all data to new servers and have a technician on-site Monday morning to insure that everything is working correctly.

**RESULT**

New reliable servers and network that increased productivity and decreased any previous downtime.
