

GREAT LAKES ANALYTICAL CASE STUDY

OUR PROCESS

PROBLEM  GLA's failing, outdated server had not been properly updated or backed-up in years. Their critical business documents were constantly at risk.

SOLUTION  GLA's old server was to be replaced with a new HP server and both an off-site cloud and on-site physical back-up was added to insure the safety of their files.

PROCESS  After an initial on-site consultation took place, an evening migration from their old server to the new was scheduled to prevent any downtime during normal business hours.

RESULT  A reliable up-to-date server was installed with no data loss during the migration. This resulted in faster speeds when accessing documents.
