TEACHERS DISCOVERY ▶ CASE STUDY

OUR PROCESS

PROBLEM
Teachers Discovery was using multiple servers and networks in 2 separate buildings. This created an overly complex workflow for employees and an unstable server environment.

SOLUTION
Consolidate servers to a single, stable network through the re-programming of multiple switches.

PROCESS
Physically relocate server to one location, re-configure all of Teachers Discovery's gear and manage/organize all cables and wires.

RESULT
A seamless migration, with no data loss that not only increased production, but made access to data easier on the end user.
